

PROTECT AGAINST COVID-19

# Duffett's Touchless Access Solution

It has never been easier or more important to move to 'Touchless'

Non-contractual picture

## No more touching unsafe buttons or handles

Infection and transmission issues are top of mind in the current environment. There's no need to physically pull a handle or push a button to open or close a door in your building anymore!

Touchless access upgrades available for:

- ✓ Automatic – 'Press to Exit' buttons
- ✓ Mag Locked/Access Controlled – 'Press to Exit' buttons
- ✓ Roller Shutter Doors and Grilles – Up and down buttons on door controllers
- ✓ Gates – Open and Close Buttons
- ✓ High usage manual doors

Before COVID-19, we thought nothing of pushing that 'Press to Exit' button to get out of a foyer, to open the after-hours door in our buildings or even just pulling on a handle to open a manual door. Now we are questioning everything we touch.

With Duffett's 'Touchless Access Solution' you can upgrade your entry and exit points to be contactless, operating on hand proximity. By placing your hand near the 'Touchless' sensor, the door will open and close to your requirements.

Most people will be used to seeing these types of 'Press to Exit' devices

Mostly seen on automatic doors and access control doors

**Give us a call** and we can organise one of our technicians to undertake a site audit to determine the most appropriate 'Touchless' solution for your operation.

We can also discuss with you how easy it is to update your high-use manual doors to automated doors utilising this 'Touchless' technology.

**Stop unnecessary contact with buttons**

**Limit the opportunity for infection transmission**

**Lead the way in ensuring a healthy building**

**100% New Zealand owned and operated**

Proudly supporting NZ suppliers
